

SonneNatural® 200 Series / J-207

Sonneborn further raises the bar on the SonneNatural line of 100% all natural vegetable based emollients. As experts in the development of hydrocarbon based emollients, Sonneborn recognizes the importance of even the most subtle, yet specific differences that are often critical to defining a finished formula. As such, we continue to apply our technical expertise to our growing line of 100% naturally derived emollients.

SonneNatural® J-207 is an ideal, natural and renewable offering for use in personal care and cosmetic applications where an emollient, moisturizer, conditioning agent, solubilizer or dispersing agent is required. This product provides excellent moisture retention and has a superior UV and microbial stability profile.

SonneNatural® J-207 offers the natural, classic look and feel of neat petroleum jelly.

Special Attributes

- Suitable for petroleum-free formulations
- Soft with medium cushion, very glossy with medium slip and playtime and high spreadability
- INCI name: Vegetable Oil (Olus Oil - EU)

Applications

- Ideal choice for an all natural jelly in a jar
- Elegant lip and skin moisture balms
- High end hair pomades and body butters
